- Handling of the components to be welded
- Maintenance
- Transport and storage
- Welding joint quality and welding joint parameters

Practice

- Operating of the welding machine
- Recording of the welding joint
- Performance of test weldings
- Inspection of welding joints

*	Status	Date Certification Training	IR welding machines	Materials
Certification Level I	Certified	2016-12-20	SP-110S	PP

After three years IR-welding experience the welder can achieve the next level of certification. For this his/her company has to confirm by official letter to AGRU Kunststofftechnik GmbH that the welder really performed perfect welding during the last 3 years.

I herewith confirm with my signature that I have been taught in the above mentioned training contents which I completely understood. I accept also that this welding instruction does not replace the welding exam acc. to DVS 2212.

This certificate is valid for 3 years as from the date of issue with the enclosed „Certification Check List“ filled in during the welding training.
